A Star made from glittery Paper Bags fitted with concealed battery-powered LED Lights

This star suspended from a grosgrain ribbon is assembled from seven thick glittery paper bags. It is fitted with battery-powered LED lights with small bulbs hidden in the hollow star's points.

Apply Clear Multi Glue Gel horizontally and vertically on each block bottom paper bag, as illustrated.

Stick all the bags together as illustrated.

Apply Clear Multi Glue Gel onto the last and outer bag and then grosgrain ribbon at your chosen length for hanging.

Pull the first paper bag round to the last, thus assembling the star.

Distribute the LEDs around the star's points. NB: Secure all the joints as the star may unfold due to the heavy quality of the paper bags.

05

You may hold the star in place with a paper clip until the glue has dried.

Place the LED battery box inside a star point near the ribbon.
