

A simple Zinc Frame with Papier-Mâché Pulp

The beautiful zinc frame is great for rough collages with natural materials. Here we have chosen simple peeled branches tied with rope and put in the pulp collage. Glue a small canvas panel measuring 12.5 x 12.5cm onto the back of the zinc frame. Make a small amount of pulp. Follow the instructions on the bag. Form small blobs of pulp and put them into the frame. Put branches on top and add some stones, simple beads or other items if you wish. During the drying process the pulp may shrink and detach itself from the canvas panel. If so, glue it back with a glue gun at the very end.
