

Sculpture Houses

These houses are moulded using shape cutters which are pressed into a layer of sand on a paint tray. Stone and glass mosaic are pushed into the sand and finally the casting compound is poured into the shape cutter.

Inspiration: 12311

1.

Sand is poured into a flat layer in the paint tray.

2.

Place stones, sticks or mosaic in the tray and press down lightly into the sand.

3.

Grease the shape cutter with a little cooking oil and press it down lightly over the stones.

4.

Mix the casting compound following the instructions on the packaging and pour it carefully into the shape cutter. Dry for approximately 30 minutes.

5.

Gently press out the shape cutter. Paint the edges with diluted Plus Color craft paint.
