

A Lantern with a Silhouette Effect made from Lolly Sticks

A square lolly stick lantern for tealight candles. Attach transparent paper onto the lantern's four sides. Glue wood veneer reindeer onto a halved wooden bead and attach to the base of the lantern, providing a dancing silhouette when the candle is lit.

Inspiration: 13224

1.

Arrange four standard size lolly sticks into a square, "balancing" on the thin side. Glue the corners together into a square. Make two squares in total.

2.

Glue four sets of lolly sticks (each set consists of two lolly sticks) together at right angles along the long side.

3.

Now you have made two squares and four right angled corners.

4.

Glue the four right angled corners in place inside each corner of one of the squares.

5.

Attach the other square with glue to the right angled corners at the opposite end. Glue two lolly sticks horizontally, and arranged in parallel (the large surface of the lolly stick facing down) onto the outside of one angled corner post to the other angled corner post onto two parallel sides of the lantern.

6.

Turn the lantern upside down and make a base from four lolly sticks which are attached with glue on the inside of the lantern against the two lolly sticks which have been glued on on the outside.

7.

Attach the wood veneer reindeer to the halved wooden bead. Insert the reindeer's hoof in the hole of the bead. Make four of these.

8.

Attach the beads with the reindeer onto the lolly stick base inside the lantern. Use glue.

9.

Measure and cut four pieces of transparent paper that fit the lantern's squared format and glue the paper onto the four sides inside the lantern along the vertical angled corner posts.
