

## A Jam Jar Snow Globe with a Fimo Clay Figure, Water and Glitter

These snow globes are made from a screw-capped jam jar turned upside down. The figures inside are modelled from Fimo Kids and – once fixed in the oven – glued firmly onto the inside of the lid. The jars are filled with demineralised water and loose glitter. The lid is glued on.

**Inspiration: 14349**

**1**

Make a figure from Fimo Kids according to your imagination. Make sure it fits in the jar lid and that you don't make it too tall.

**2**

Place the finished figure in a household oven at 130°C for 30 minutes.

**3**

With help from an adult, glue the figure onto the inside of the lid (use water resistant super glue).

**4**

Sprinkle glitter into the jar (you choose how much).

**5**

Fill the jar to the rim with tap water and some glycerine. A TIP: preferably de-mineralised water which is free from bacteria and therefore lasts longer (this, and glycerine, are available from the chemist). The glycerine makes the glitter fall gently when shaking the jar.

**6**

Apply Clear Multi Glue onto the rim of the lid and screw the lid with the glued on figure onto the jar.

**7**

Shake the jar to see the effect.
