

Dabbing Technique on Plastic

It's very easy to dab A-Color Glass paint onto plastic with a great result. A-Color Glass paint doesn't need fixing in an oven when dry and is great on white or transparent plastic items. Choose either dabbing on the outside of the white plastic items or on the inside of two-piece transparent plastic items.

Inspiration: 15101

1

Dab on A-Color Glass paint with a foam stencil brush and leave to dry. You may choose to work with several colours, for example in blue/turquoise and red/orange shades etc. You may hold the collar whilst painting.

2

Our two-piece plastic products have the advantage that they may be decorated on the inside which results in a super glossy outer surface when assembled and dry. Both halves of the plastic item may be placed on the table whilst painting, making the painting and drying processes easier.
